**SURVEY CONTROL AND
ENGINEERING SURVEYING**

Oct./Nov. 2018

Time: 3 hours

THE KENYA NATIONAL EXAMINATIONS COUNCIL

DIPLOMA IN LAND SURVEYING

SURVEY CONTROL AND ENGINEERING SURVEYING

3 hours

INSTRUCTIONS TO CANDIDATES

You should have the following for this examination:

Answer booklet;

Scientific calculator.

This paper consists of SIX questions in TWO sections; A and B.

Answer any FOUR questions choosing at least TWO questions from each section.

Each question in section A carries 30 marks, while each question in section B carries 20 marks.

Maximum marks for each part of a question are as indicated.

Candidates should answer the questions in English.

This paper consists of 7 printed pages.

Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no questions are missing.

SECTION A: SURVEY CONTROL

Answer **TWO** questions from this section.

1. (a) State **six** sources of error when measuring angles in traversing. (6 marks)
weather conditions - instrument errors - human errors - Natural errors
- (b) **Figure 1** shows point F which is the starting point of a traverse but is inaccessible. A distant triangulation point P can be seen from point M that is near F. A point E is established and the following linear and angular observations made:

Reduced distance ME	=	212.53 m
Angle FEM	=	82° 39' 00"
Angle FME	=	52° 34' 01"
Angle FMP	=	76° 06' 31"

The datum coordinates of P and F are:

STN	N (m)	E (m)
P	+558.62	+889.12
F	+104.18	+1196.16

Calculate:

- (i) the bearing of line PM;
 (ii) the coordinates of M.

(15 marks)

Handwritten calculations:

P N(m)	E(m)	
+558.62	+889.12	
<i>changes - (distance, brg)</i>		
+ (212.53, 76° 06' 31")		
ΔN = 51.03	ΔE = 206.31	
P = 558.63	+889.12	
51.03	-206.31	
-507.59	-682.81	

Fig. 1

Coordinates of M
 (212.53, 76° 06' 31")

brg = (-507.59, -682.81)
brg = 126.627

- (c) Outline the sources of error encountered in fixing a point by Global Positioning System (GPS). (9 marks)

2. (a) Use the following information to determine the coordinates a new point P by the intersection method. (15 marks)

Coordinates		
Point	N (m)	E (m)
A	+1668.40	+12600.36
B	+3949.19	+9577.46

Bearings:

$$A - P = 259^\circ 38' 20''$$

$$B - P = 197^\circ 18' 32''$$

- (b) Table 1 shows horizontal angles observed from a triangulation station X. Reduce the observations and obtain the final adjusted bearings. (9 marks)

Table 1

A	B	C	D	E	A
242° 37' 39"	261° 39' 18"	265° 08' 18"	263° 08' 47"	328° 37' 40"	242° 37' 39"
62° 37' 38"	81° 39' 23"	85° 08' 13"	83° 08' 44"	1481° 37' 46"	62° 36' 46"
287° 36' 59"	306° 39' 51"	310° 08' 10"	308° 09' 07"	13° 37' 41"	287° 37' 46"
107° 37' 40"	126° 39' 48"	130° 08' 18"	128° 08' 29"	193° 37' 42"	107° 37' 46"

- (c) Describe the field procedure for determining the difference in level between two points A and B by ordinary spirit levelling. (6 marks)

3. (a) State:
- the **two** assumptions made in all methods of altimetric heighting;
 - the **three** distinct causes of the difference in pressure between two points on the surface of the earth.

(6 marks)

- (b) **Table 2** shows altimetric readings for three altimeters carried out in the morning and evening for the purpose of indexing. Taking altimeter A as the standard, determine the mean index corrections to be applied on altimeter B and C. (6 marks)

Table 2

Time	A	B	C	Time	A	B	C
08:00	283.77	285.29	282.55	4:00	299.92	302.26	298.09
08:05	283.46	285.29	282.24	4:05	299.92	302.06	297.79
08:10	283.46	284.99	282.24	4:10	299.62	302.06	298.40
08:15	283.16	284.99	282.94	4:15	299.14	301.45	298.09

- (c) Draw a field note page and demonstrate how the following are carried out in precise levelling:

- (i) order of booking staff readings;
- (ii) type of readings per staff;
- (iii) checking of staff readings.

(8 marks)

- (d) With the aid of a diagram, explain the Declination (Dec) and Right Ascension (RA) coordinate system of star "S" as used in field astronomy.

(7 marks)

- (e) **Figure 2** shows an Astronomical triangle ZPS. Label the triangle and show that:

$$\cos Z = \frac{\sin \delta - \sin \phi \sin \phi}{\cos \delta \cos \phi}$$

(3 marks)

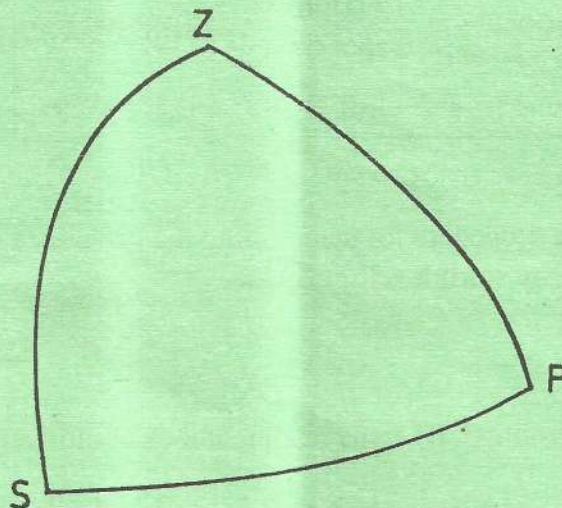

Fig. 2

SECTION B: ENGINEERING SURVEYING

Answer TWO questions from this section.

4. (a) With the aid of a diagram, state the elements of a simple circular curve giving the formula for determining each. (9 marks)
- (b) A simple circular curve of radius 740 m has been set out connecting two straights with a deflection angle of 46° . It is decided that for construction reasons, the mid-point of the curve must be moved 6 m towards the centre from the intersection point. The alignment of the straights is to remain unaltered.
- Calculate:
- (i) the radius of the new curve;
 - (ii) the distances from the intersection point to the new tangent points;
 - (iii) the deflection angles required for setting out 30 m chords of the new curve;
 - (iv) the length of the final sub-chord.
- (9 marks)
- (c) State **two** purposes of a transition curve. (2 marks)

5. (a) **Table 3** shows staff readings taken for setting out pegs A and B and a trench from TBM of R.L. 100.00 m above datum. Pegs A and B are to be set out at R.L. 100.792 m and 100.719 m respectively. If the R.L. of trench is 100.448 m and a 2 m boring rod is used:
- (i) Fill the missing readings marked x_1 , x_2 , x_3 and x_4 to complete the booking.
 - (ii) Reduce the readings by the rise and fall method applying the arithmetic checks.

Table 3

BS	IS	FS	Remarks
1.754			T.B.M. R.L. 100.00 m
	x_1		Peg A R.L. 100.792 m
1.947		x_2	Peg B R.L. 100.719 (C.P.)
	x_3		Profile R.L. 102.448 m
1.847		2.103	Plate level (R.L. x_4) C.P.
		2.410	T.B.M. R.L. 10000 m

(14 marks)

(b) Explain the use of sight rails and boning rods in levelling for construction. (6 marks)

6. (a) Figure 3 shows a triangular piece of land ABC with corner coordinates. Use the information to show that the area of the parcel in square units is given by:

$$\text{Area} = \frac{1}{2} [x_2y_1 + x_3y_2 + x_1y_3 - x_1y_2 - x_2y_3 - x_3y_1] \quad (9 \text{ marks})$$

Fig. 3

(b) State:

(i) **four** methods of controlling verticality in multi-storeyed structures;

(ii) **three** methods of determining planimetric positions of soundings.

(5 marks)

- (c) **Figure 4** shows two vertical wires P and Q hang in a shaft, the bearing PQ being $55^{\circ} 10' 30''$. A theodolite at R to the right of PQ produced measured angle PRQ as $00^{\circ} 20' 25''$. The distances PR and QR were 7.4782 m and 4.2998 m respectively.

Calculate:

- (i) the perpendicular distance from R to PQ produced;
- (ii) the bearing of line RP;
- (iii) the angle to be set off from QR to establish RT parallel to PQ produced.

(6 marks)

Fig. 4

THIS IS THE LAST PRINTED PAGE.
